

## Software for Portfolio Management

***GesLearn®-Portman is a Window-PC based software for Portfolio Management.***

GesLearn®-PortMan (Portfolio Management) is a Window Software for recording share and other security trading activities for private investors and small investment companies.

It enables batch update of the latest price of shares and other securities. It can record the opportunity costs of the capital such as interest rate and report the performance of the portfolio of one or more accounts. It stores the information in Microsoft Access Database.

The Evaluation version is free, has no expiry date but has a limit of 100 records. It can be downloaded at:

## Software for Document Search, Keywords and Indexing

***GesLearn®-Docis (Document Index and Search System) is a Window based software for indexing, searching and categorizing documents.***

GesLearn®-Docis (Document Index and Search System) originated when someone who failed to find a similar product ended up developing one. It is a Window-based system for document search and indexing. It has two subsystems: 'MyComputer Search' and 'Docis Search'.

**MyComputer Search**

MyComputer Search enables search for files on your computer in ways similar to those provided by Windows. In addition, it enables you to define and save your search scope, quickly view your files and save your selections of files.

**Docis Search**

Docis Search enables you to select and save the directories containing your data files, define the Keywords for indexing, classify your files, write your abstracts and save your selections of files. It stores information with Access Database.

The Free software with some limitations but no time limit for evaluation can be downloaded at:
